Date of Issue:

8 April 2026: Morning Forecast Valid: 06:00 – 18:00

DESCRIPTION OF THE WEATHER

Cloudy and slightly warm in lowlands but cool in some places in the highlands. There is a chance of 60% of rain and thunderstorm countrywide.

Wind: Light to moderate south-westerly.

Temperatures range: 18 °C to 32°C

ADVISORY MESSAGE

Heavy rain from thunderstorms can lead to **flash flooding**, increasing the risk of drowning and injuries. Floodwater is often contaminated and can spread **waterborne diseases** such as diarrhoea.

Health warning: Never walk or drive through floodwaters; boil or treat drinking water after floods.

Heavy rainfall can lead to waterlogging for crops, compromising crop harvest.

Agric warning: do not immediately return livestock to flooded pastures

Warning to Road Users

The A2 road (Main South 1) between Mohale's Hoek and Quthing is expected to experience hazardous driving conditions due to scattered thunderstorms and fluctuating temperatures. Road users should prepare for a mix of lowland and highland terrain that reacts differently to the current weather patterns.

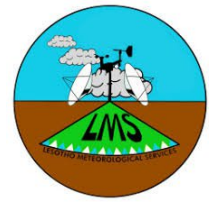

Expected Impacts on the A2 Route

- **Reduced Visibility:** Thunderstorms and cloudy conditions will significantly reduce sightlines, particularly as the road traverses the higher elevations between the two districts.
- **Slippery Surfaces:** With a 60% chance of rain, the road surface—which has undergone various stages of rehabilitation—may become slick, increasing the risk of skidding.
